

#1 *in Ohio for* Major Cardiac Surgery

The Structural Heart Clinic at Kettering Medical Center is now able to offer new HOPE to those patients with moderate to severe aortic stenosis, who are at high risk for open heart surgery.

TAVR (transcatheter aortic valve replacement) is a new technology, which offers patients who qualify a chance for a longer, more active life. The advanced percutaneous procedure is led by our multidisciplinary team of expert interventional cardiologists, cardiothoracic surgeons, surgical, and cardiac cath clinicians.

Each patient is evaluated by our highly specialized team to ensure they are an appropriate candidate for TAVR.

Our heart clinic team is committed to providing personalized and compassionate care using a patient-centered collaborative approach, helping each patient navigate throughout the plan of care from start to finish.

From initial consultation, evaluation, treatment, and follow up, our team works closely with patients, families, and referring physicians to develop and implement the plan of care that is most appropriate for each patient.

For more information about TAVR, please contact The Structural Heart Clinic at Kettering Medical Center, **(937) 395-6023**.
