

KETTERING HEALTH NETWORK HEART AND VASCULAR CARE

Are you suffering from painful legs including heaviness, achiness, swelling, throbbing, and itching?

Kettering Health Network offers a wide assortment of vein procedures to treat varicose veins. These treatments can significantly improve the appearance of the legs and decrease symptoms. Treatment options include sclerotherapy, endovenous thermal ablation, laser surgery, and liquid and foam ablation. Our team of physicians includes both cardiologists and vascular surgeons who collaborate to offer exceptional care. All physicians are board certified, fellowship trained, and recognized leaders in the region with expertise in treating varicose veins. Our team of physicians uses detailed imaging tests to accurately diagnose varicose veins and determine the most appropriate method of treatment for you.

Make sure you know the facts about varicose vein treatment:

- The treatment is outpatient.
- It does not require sedation or general anesthesia.
- The incisions involved are minimal.
- The treatment effectively relieves symptoms.
- You can resume light activity the same day as treatment.
- The swelling and discomfort you may experience post-treatment is minimal.
- Self-referrals are accepted.
